

Reduce iPhone file size.

One way to reduce the file size of a picture on iPhone is to email it to yourself from your iPhone. After you hit 'Send' you should get a dialog box providing the option to change the size. Choose the smallest size. Open the email on our iPhone and save the file. You can upload that saved file to the 2nd Meter Reporting Portal.

There are other options available that require you to download an app. Here is a link to a 'How To' page provided by an unaffiliated third party.
